Tutorial 3

Question 1

Declare an array of type double, with 10 elements. Write a program, including a for loop, that displays the contents of the array.

Question 2

Declare an array of type float, with 5 elements, to hold monthly sales income in thousands of pounds. Write a program that allows a user to input values for the array, then displays the contents of the array.

Question 3

Write a program that allows a user to input a number of integers in an array and then displays the smallest as well as the largest in the list.
